

ENCODE x ARC · STABLECOIN HACKATHON · AUG 2026

DANCE MOVE TOKENS

Onchain rights + streetwear, settled in stablecoins on Circle's Arc.

USDC gas

EURC + cirBTC

Privy · Google login

Verified on Arcscan

streetdancearc.lovable.app

THE PROBLEM

Choreographers built the internet's dance layer. They got paid \$0.

\$0

paid to the choreographer behind the most-copied TikTok dance of 2025.

No registry of who made which move.

No settlement rail once it goes viral.

Merch and licensing revenue routes around the creator.

Street dance already knows how to give credit.

We give it a settlement layer.

CULTURE

“Credit or catch a fade.”

Crews, battles, and callouts already enforce authorship offline. The rules exist — the receipts don't.

ONCHAIN

log(token, amount, cid) — one call, immutable, priced in USDC / EURC / cirBTC. Arcscan is the receipt.

Two products. One repo. Same wallet.

Agentic Economy

RIGHTS REGISTRY

Log any dance move onchain in one call. AI agent quotes, pays, and files the receipt autonomously.

DeFi

STREETWEAR SHOP

Sneakers, snapbacks, jackets. Checkout in USDC, EURC, or cirBTC via Circle App Kits.

Shipped. Deployed. Verified.

Verified on Arcscan · USDC · EURC · cirBTC supported

The Rights Agent files receipts while you sleep.

01

User

"Log the reverse windmill."

02

Agent

Gemini + Circle Agent Stack decides token + fee.

03

Pay

Signs USDC / EURC / cirBTC from treasury wallet.

04

log()

Contract writes token, amount, cid onchain.

05

Receipt

Arcscan tx returned to user, no click required.

Autonomous spending in USDC · decision logic in the agent, not the UI.

Programmable money for the culture.

MULTI-STABLECOIN CHECKOUT

Shopify catalog priced in USD, settled in USDC, EURC, or cirBTC. App Kits Unified Balance picks the token with headroom.

NANOPAYMENT ROYALTIES

arc-nanopayments streams sub-cent USDC per play back to the choreographer's wallet. Continuous, not periodic.

Meaningful use of Arc · conditional flows · App Kits + arc-nanopayments.

Every judging bullet has a feature behind it.

JUDGING BULLET

OUR FEATURE

Meaningful use of Arc / USDC

Contract deployed + verified, USDC as gas token

Programmable money flows

Autonomous agent settlement + nanopayment royalty streams

Uses App Kits

Unified Balance + Send in the streetwear checkout

Agent with decision logic

Rights Agent picks token, fee, and files log() unattended

Autonomous spending in USDC

Treasury wallet signs via Circle SCP — no manual approval

Uses Agent Stack

Circle agent-stack-starter-kits scaffolds the Rights Agent

Working today. Shipping through Demo Day.

SHIPPED

- ✓ Contract verified on Arcscan
- ✓ Privy Google login + embedded wallet
- ✓ 7 SKUs live in Shopify (dev store)
- ✓ USDC / EURC / cirBTC token switcher
